

RiMAX Blue Pond Dye

Concentrated Blue Lake/Pond Dye

- *Treats Koi ponds, water gardens, and lakes for cosmetic effects*
- *Filters sunlight and creates a pleasing appearance*
- *Will not stain permanent surfaces, birds, fish, plants, pets or wildlife*
- *Compatible with most aquatic herbicides & algaecides*

RiMAX Blue Pond Dye is a concentrated blue lake dye formulated to treat larger ponds & lakes.

It will help filter out sunlight as well as create a more aesthetically pleasing appearance to the pond, by offering a “natural blue” look to the water.

It will not stain permanent surfaces, birds, fish, plants, pets, or wildlife when applied at the recommended rate.

It is non-toxic and is compatible with most aquatic herbicides and algaecides.

For best results, this product should be used with beneficial pond bacteria like RiMAX’s “Bio Pond Treet” microbial pond clarifier, to help ensure your pond or lake remains clean and clear all season long.

COVERAGE & APPLICATION:

Liquid Quart Containers: Each super concentrated quart will treat an entire acre of pond water, up to 4-8 feet deep (approximately 1-2 million gallons).

Dry 3oz Water-Soluble Packets: Apply 1 packet per ¼ acre of pond with average depth of 4-8 feet (50,000-500,000 gallons of water).

RiMAX Blue Pond Dye is best mixed quickly and evenly throughout the pond with the use of a fountain, aerator or similar mechanical device. Add more product for a darker color.
