

DryJect[®]
21st Century Aeration™

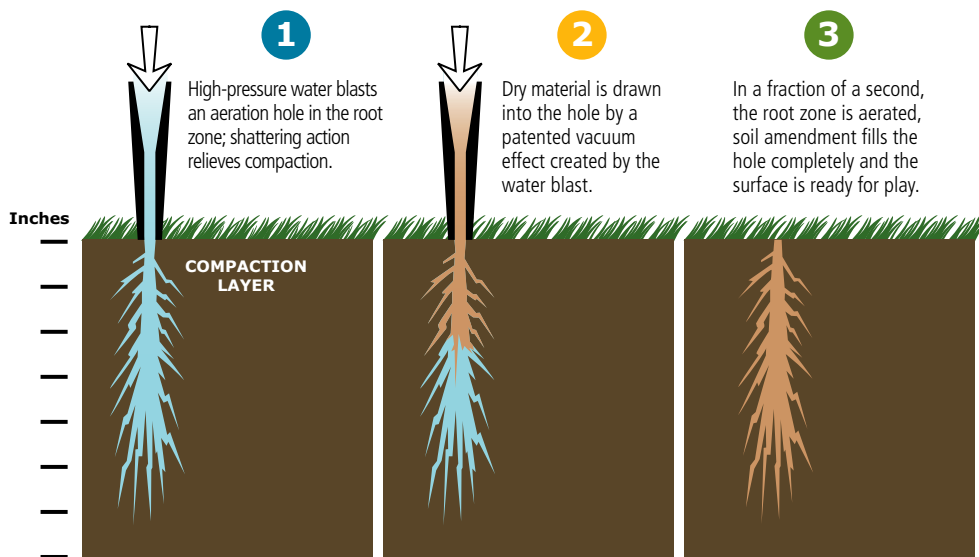

AERATE, TOPDRESS AND AMEND IN ONE PASS

A NEW SERVICE TO SAVE YOU TIME AND MONEY

Traditional core aeration is time consuming and requires several steps to return turf to a playable surface. DryJect® is a revolutionary service which, when added to your maintenance program, can reduce the need for core aeration and greatly amplify its benefits.

It utilizes a high-speed, water-based injection system that blasts aeration holes through the root zone to fracture the soil, while using patented vacuum technology to simultaneously fill with amendment. Relieve compaction, increase water filtration, reach the root zone with oxygen and amend your soil all at the same time, leaving the surface smooth and playable. Best of all, an independent DryJect service professional does it for you, so you don't need to own the DryJect machine to experience its benefits.

Call a DryJect service center today at **800-270-TURF** and see for yourself how DryJect can save you time and money.

A BETTER WAY

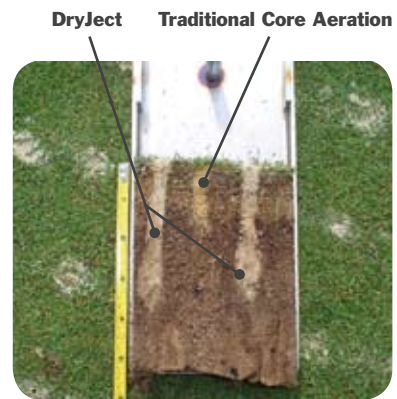

DryJect aerifies and modifies your soil better than traditional aeration methods.

TRADITIONAL three-step aeration involves pulling cores, topdressing and sweeping or dragging amendment into turf.

DRYJECT one-step aeration leaves the surface free of plugs; it's clean, smooth and ready to play.

DRYJECT penetrates deep, and three-dimensionally into the root zone to fracture soil and deliver necessary amendments.

THE DRYJECT® ADVANTAGE

On both cool and warm season turf, DryJect's unique agronomic benefits fit into any maintenance routine. DryJect offers the advantages of being:

COST-EFFICIENT. DryJect is a contracted service with professional machine operators, lowering labor costs and freeing up your maintenance staff. Plus, DryJect allows uninterrupted play so there's minimal lost revenue.

FAST. Aerate, topdress and amend in one operation. The surface is playable one hour after application.

VIRTUALLY INVISIBLE. Minimal cleanup or surface disruption.

EFFECTIVE. Deep aeration holes are filled completely whether injecting in sports turf or putting greens up to 11 tons of sand or 4 tons of Profile™ Porous Ceramic (8 cubic yards) per acre.

IMMEDIATELY HELPFUL. During the playing season, a quick application can relieve stressed areas when they need it most.

VERSATILE. You can adjust depth (2-8 inches depending on soil type and compaction) and aeration spacing (2-6 inches).

GOLF COURSES

- No cores to clean up, so applications are quick with minimal interruption of play.
- Provides immediate relief during summer heat and high-traffic by reducing compaction and amending the soil (depending on turf type).
- Equally effective on greens, tees, approaches and fairways.
- Injecting amendments dilutes the organic content of soils.

SPORTS FIELDS

- No matter the season, stressed areas of fields can be treated when they need it most with minimal disruption of play.
- Penetrates longer sports field grass equally as well as golf greens.
- Core-free aeration leaves the surface clean and free of debris for a better-looking field.

PUT IT IN THE GROUND

DryJect is equipped to inject a variety of dry, flowable materials,* such as:

- Soil Amendments
- Sand
- Seed
- Insecticides
- Wetting Agents
- Fungicides
- Fertilizers
- Biologicals
- Root Stimulants

**Use in accordance with product labels.*

To get the most out of your DryJect service use Profile™ Porous Ceramic.

PROFILE™ GREENS GRADE™ is a premium soil amendment for root zones. It works continuously in the soil to solve and prevent problems associated with compaction, poor drainage and poor water and nutrient retention. Greens Grade meets the specifications outlined in the 2004 USGA *Recommendations for a Method of Putting Green Construction*.

PROFILE™ FIELD & FAIRWAY™ uses a larger particle size to treat native soil on tee boxes, fairways and sports fields. It holds moisture and nutrients, provides a balance of air and water pore space and increases drainage.

Profile Porous Ceramic products now come in an **EMERALD COLOR**, making them the first conditioners to use a rich, green color that blends in with your turf.

TAKE IT FROM THE PROS

Turf managers at some of the most prestigious golf courses and sports fields in the nation have already discovered the DryJect® difference. In fact, 10 of the top 15 golf courses from *Golf Digest's* 2006 Top 100 courses* use DryJect.
